

I am a truck driver and an XM subscriber. I enjoy getting weather and traffic information 100-200 miles away from whatever city i may be going to. This allows me better trip planning.

XM is a pay (subscriber service). The NAB has no business trying to put controls on XM. I believe that the people at NAB are jealous of XM because they cannot and will not do what XM does, give the customer (listener,SUBSCRIBER) what they want to hear.

XM is the future in radio broadcasting, satelite radio, and subscriber type radio. PLEASE do not do anything that would jeopardize the future of satelite radio.
